Immunization—Every Doctor a Health Officer..... 113
Insanity, The Causes of..... 109

*(Continued on page 50)*

**Trial lens accuracy greater range, thrice the speed**

JUST what is our NEW "Phoroptor?"

*A complete, self-contained instrument for the refraction of the eye, with a battery of lenses for each eye, giving accurate, quick and exhaustive data on both refraction and muscle work for the oculist.*

Unlike all instruments of similar purpose, our new Wellsworth-DeZeng Phoroptor is equipped with additive lenses—lenses so adjusted in position and power that actual *effective power* is indicated by adding together their marked values. A new method, fully as accurate as the trial frame, accomplishing correct refraction at thrice the speed.

And our Phoroptor retains the muscle testing advantages of all older models, facilitated, however, by longer handles on its rotary prisms.

The instrument is suspended from above, easy of manipulation, systematically designed, with a greater range of *effective power* lenses than the average trial case: The spherical range is 23.88 to —24 and cyl. —0.12 to 3.00 increased by 0.120.

*Improved*

EFFECTIVE POWER

PHOROPTOR
